ABSTRACT
This paper presents the design and implementation of a portal system for secondary schools in Ondo state (using FUTA secondary school as a case study). The system signify a typical educational system in a computerized way in order to give parents, students, teachers, and the school director a platform to communicate with each other in a fast and direct way. The system has some administrative privileges that can add/remove users and assign the account type with privileges. The developed system is mobile a mobile friendly software which allows the user to access the system by using different device sizes and make it accessible to users according to the username and password. The software make use of the three tier architectural design of a website and its respective applicable programming languages in designing the system, the likes of HTML, CSS, JAVASCRIPT, PHP and SQL Server Management Studio have been used to build the system. The system can be used by the students, parents, teachers, and the school director.
Keywords: Education System, Mobile-friendly Software, Portal System, System Design, and SQL Server.
